

Extended Life Coolant Test Kit Specifications & Instructions

ACU-4048

Please read all instructions and safety information prior to using product.

Introduction

The Acustrip 4048 series of test strips combines two of our most popular extended life coolant tests in a single kit. Experts recommend testing extended life coolant at every oil change interval to measure its purity and detect possible contamination. The kit contains two R071-ELC (Ford Rotunda Part Number 328-071ELC) tests and two CTS-3 (Ford Rotunda part number 328-2050) strips. The kit comes complete with vial, pipette and instructions. Testing your extended life coolant can help detect depletion of additives and help prevent small problems from becoming big ones.

Availability

The Acustrip 4048 series is available as individual kits or in master cases of 24.

General Procedures

Complete instructions for the R071-ELC can be found at: <http://www.acustrip.com/res/pss/PSS-R071.pdf>

Complete instructions for the 2050 can be found at: <http://www.acustrip.com/res/pss/PSS-CTS3.pdf>

SAFETY WARNING: REMOVAL OF RADIATOR CAP IS DANGEROUS

Radiators are under pressure. Hot coolant under pressure can cause severe burns. Do not remove the radiator cap on a hot engine. Wait until the temperature is below 50° Celsius (120° Fahrenheit) before removing the cap. Failure to wait may result in personal injury from hot coolant spray or steam. Remove cap slowly to relieve all pressure.
